

# Relational Model Assignment

## CS5200 - Introduction to Relational Databases

Consider the UML class diagram shown below. Create the corresponding SQL that implements the equivalent relational model, fulfills the use cases, implements the relations, and enforces the constraints. [A link to this assignment can be found here.](#)

### UML Class Diagram

### Create Schema (20pts.)

Use SQL to create the following schemas with the properties, data types, and relations as described in the UML class diagram. All tables should define a primary key called "id" configured to auto increment if no value is provided. Foreign keys should have the same name as the table they refer to. Enforce required fields and cardinality. Do not use "enum" to implement the <<enumeration>>. Implement associations between the tables either as primary key/foreign key and/or additional mapping tables, e.g., roles.

1. (0pts) Create a brand new schema called **hw2\_lastname\_firstname\_fall\_2017**, **lastname** and **firstname** are YOUR last and first names. Do all your work in that schema.
2. (5pts) Create tables person, developer, and user. Implement generalization using separate tables for each class. Name the constraint on the foreign keys using the following pattern: subclass\_superclass\_generalization, where subclass and superclass are the subclass and superclass in the diagram. For instance if person is a superclass and faculty is a subclass of person, then the foreign key constraint name would be faculty\_person\_generalization

- (5pts) Create tables website, page, widget, heading, html, youtube, image. Implement generalization using a single table. Use a new field called type to discriminate for the type. Use the class name as the values of the field. Default heading size should be 2
- (5pts) Create tables address and phones
- (5pts) Create tables for website and page roles, and enumerations

## Implement Inserts (20pts.)

Provide SQL queries that insert the data shown below. Note that some will require inserting into more than one table. Use the IDs where provided, otherwise the ID fields should be configured to auto increment. Auto generated IDs can be used where not specified. Nested queries may be used to inquire about previously inserted data. Later inserts can assume data exists from earlier inserts.

- (4pts.) Create the following developers and users. Insert into the correct tables depending on the type

id	Username	Password	First	Last	Type	Email	Key
12	alice	alice	Alice	Wonder	Developer	alice@wonder.com	4321rewq
23	bob	bob	Bob	Marley	Developer	bob@marley.com	5432trew
34	charlie	charlie	Charles	Garcia	Developer	chuch@garcia.com	6543ytre
45	dan	dan	Dan	Martin	User	dan@martin.com	7654fda
56	ed	ed	Ed	Karaz	User	ed@kar.com	5678dfgh

- (4pts.) Create the following web sites for the developers above. For both the created field and updated field, use the date your assignment will be graded, e.g., do not hardcode it

id	Name	Description	Owner	Editor	Admin	Visits
123	Facebook	an online social media and social networking service	alice	bob	charlie	1234234
234	Twitter	an online news and social networking service	bob	charlie	alice	4321543
345	Wikipedia	a free online encyclopedia	charlie	alice	bob	3456654
456	CNN	an American basic cable and satellite television news channel	alice	bob	charlie	6543345

567	CNET	an American media website that publishes reviews, news, articles, blogs, podcasts and videos on technology and consumer electronics	bob	charlie	alice	5433455
678	Gizmodo	a design, technology, science and science fiction website that also writes articles on politics	charlie	alice	bob	4322345

3. (4pts.) Create the following pages for the web sites above. Use the semester's start date for the created field. Use the assignment's due date for the updated field.

id	Name	Description	Website	Editor	Reviewer	Writer	Views
123	Home	Landing page	CNET	alice	bob	charlie	123434
234	About	Website description	Gizmodo	bob	charlie	alice	234545
345	Contact	Addresses, phones, and contact info	Wikipedia	charlie	alice	bob	345656
456	Preferences	Where users can configure their preferences	CNN	alice	bob	charlie	456776
567	Profile	Users can configure their personal information	CNET	bob	charlie	alice	567878

4. (4pts.) Create the following widgets for the pages shown.

id	Name	Type	Text	Order	Width/Height	Url	Page
123	head123	heading	Welcome	0	null	null	Home
234	post234	html	<p>Lorem</p>	0	null	null	About
345	head345	heading	Hi	1	null	null	Contact
456	intro456	html	<h1>Hi</h1>	2	null	null	Contact
567	image345	image	null	3	50x100	/img/567.png	Contact
678	video456	youtube	null	0	400x300	https://youtu.be/h67VX51QXiQ	Preferences

5. (4pts.) Create the following phones and addresses for the users or developers shown

Username	Phones	Addresses
alice	<b>123-234-3456</b> 234-345-4566	<b>123 Adam St., Alton, 01234,</b> 234 Birch St. Boston, 02345
bob	<b>345-456-5677</b>	<b>345 Charles St., Chelms, 03455,</b> 456 Down St., Dalton, 04566, 543 East St., Everett, 01112
charlie	<b>321-432-5435</b> 432-432-5433 543-543-6544	<b>654 Frank St., Foulton, 04322</b>

## Implement Queries (20pts.)

Write SQL to implement the following queries. Assume the data inserted in the prior problem set. Nested loops may be used.

1. (5pts.) Retrieve developers
  - a. Retrieve all developers
  - b. Retrieve a developer with id equal to 34 (charlie)
  - c. Retrieve all developers who have a role in Twitter other than owner (charlie, alice)
  - d. Retrieve all developers who are page reviewers of pages with less than 300000 visits (charlie)
  - e. Retrieve the writer developer who added a heading widget to CNET's home page (charlie)
2. (5pts.) Retrieve websites
  - a. Retrieve the website with the least number of visits
  - b. Retrieve the name of a website whose id is 678 (Gizmodo)
  - c. Retrieve all websites with videos reviewed by bob (CNN)
  - d. Retrieve all websites where alice is an owner (Facebook, )
  - e. Retrieve all websites where charlie is an admin and get more than 6000000 visits
3. (5pts.) Retrieve pages
  - a. Retrieve the page with the most number of views
  - b. Retrieve the title of a page whose id is 234
  - c. Retrieve all pages where alice is an editor (About)
  - d. Retrieve the total number of pageviews in CNET
  - e. Retrieve the average number of page views in the Web site Wikipedia
4. (5pts.) Retrieve widgets
  - a. Retrieve all widgets in CNET's Home page
  - b. Retrieve all youtube widgets in CNN

- c. Retrieve all image widgets on pages reviewed by Alice
- d. Retrieve how many widgets are in Wikipedia

## Implement Updates (20pts.)

- 1. (5pts.) Update developer - Update Charlie's primary phone number to 333-444-5555
- 2. (5pts.) Update widget - Update the relative order of widget head345 on the page so that it's new order is 3. Note that the other widget's order needs to update as well
- 3. (5pts.) Update page - Append 'CNET - ' to the beginning of all CNET's page titles
- 4. (5pts.) Update roles - Swap Charlie's and Bob's role in CNET's Home page

## Implement Deletes (20pts.)

- 1. (5pst.) Delete developer - Delete Alice's primary address
- 2. (5pst.) Delete widget - Remove the last widget in the Contact page. The last widget is the one with the highest value in the order field
- 3. (5pst.) Delete page - Remove the last updated page in Wikipedia
- 4. (5pst.) Delete website - Remove the CNET web site, as well as all related roles and privileges relating developers to the Website and Pages
